    (D) a reminder that the interest rates would rise the following month
Section III: Reading Comprehension (20 分，每题 4 分)

Manic depression is another psychiatric illness that mainly affects the mood. A patient suffering from this disease will alternate between periods of manic excitement and extreme depression, with or without relatively normal periods in between. The changes in mood suffered by a manic-depressive patient go far beyond the day-to-day mood changes experienced by the general population. In the period of manic excitement, the mood elevation can become so intense that it can result in extended insomnia, extreme irritability, and heightened aggressiveness. In the period of depression, which may last for several weeks or months, a patient experiences feelings of general fatigue, uselessness, and hopelessness and, in serious cases, may contemplate suicide.

1. The paragraph preceding this passage most probably discusses
   (A) when manic depression develops
   (B) a different type of mental disease
   (C) how moods are determined
   (D) how manic depression can result in suicide

2. The topic of this passage is
   (A) various psychiatric illnesses
   (B) how depression affects the mood
   (C) the intense period of manic excitement
   (D) the mood changes of manic depression

3. The passage indicates that most people
   (A) never undergo mood changes
   (B) experience occasional shifts in mood
   (C) switch wildly from highs to lows
   (D) become highly depressed

4. The pronoun “it” in line 5 refers to
   (A) the general population
   (B) the mood elevation
   (C) insomnia
   (D) heightened aggressiveness

5. The passage implies that
   (A) changes from excitement to depression occur frequently and often
   (B) only manic-depressive patients experience aggression
   (C) the depressive phase of this disease can be more harmful than the manic phase
   (D) suicide is inevitable in cases of manic depression
